EDUCATION

2022 - 2026
SAXION UNIVERSITY

- Bachelor of Creative Media and Game Technologies

2016 - 2021
HIGH SCHOOL OF MATHEMATICS PAZARDZHIK

- Mathematics and Information Systems

SKILLS

- C/C++
- C#/.NET
- Unity 3D/XR
- Unreal Engine 5
- Godot
- Vulkan, OpenGL
- Cmake
- TCP/UDP Protocols
- Agile Development

LANGUAGES

- English (Fluent)
- Bulgarian (Native)

PROFILE

Software Engineer with **2+ years** of experience in C/C++ development. Specializing in high-performance 3D rendering and game engine tooling, with additional experience in processing and visualizing large-scale geospatial data such as terrain and GIS formats in real-time applications. Passionate about delivering robust, well-engineered solutions that never compromise on performance or quality.

EXPERIENCE

Software Developer at AVES Reality 2024 - PRESENT

C/C++ Software Engineer

- Designed, developed, and maintained the C++ backend of a desktop application for creating digital twin environments
- Built and maintained an Unreal Engine plugin for importing generated digital twin environments directly into Unreal levels
- Implemented pipelines for processing and handling large-scale geospatial imagery
- Developed a custom Unreal Editor Mode for interactive editing of road geometry based on the ASAM OpenDRIVE standard
- Contributed to the integration of large-scale open worlds into Unreal Engine, ensuring efficient loading and rendering of large environments

RELEVANT PROJECTS

Road Editor - Unreal Editor Mode 2026

Project at AVES Reality

- Built and shipped a custom Unreal Editor Mode for road editing, compatible across Unreal Engine versions 4 - 5
- Optimized editor performance to keep editing smooth and responsive in real time
- Designed a cache-friendly road network data structure based on the ASAM OpenDRIVE standard, built for fast insertion, deletion, and traversal

Holo Fan Project 2025

Graduation Project: Real-time interactive applications for hologram display

- Reverse-engineered the communication protocol of a hologram fan display.
- Built a Unity integration that allows games and interactive applications to be displayed directly on the hologram display
- Identified and addressed a key performance bottleneck, making real-time interaction with the device possible
